AI & Automation (Modern Systems. Zero Effort.)

At Indiiserve.ai, we streamline your operations through advanced AI and automation solutions, so you can scale faster with zero routine grind.

WHAT WE DO

- WhatsApp & Web Chatbots
- Workflow Automation
- AI Voice Agents
- Data Integration Systems

Our Early Impact (First 3 Months)

30-40%

Leads saved with instant, round-the-clock engagement.

2-3X

Productivity boosted by removing manual routine work.

24/7

Systems up and running while you focus on scaling.

RESULT: AI and automation that keep your business moving faster, smarter, and more efficiently—so you focus on growth, not grind.

AI Use Case 1 – Travel Industry

24/7 Engagement. Zero Lead Loss.

WHAT WE DO

- **The Challenge:** A mid-scale travel agency was struggling with high inquiry volumes and slow responses, leading to lost customers and a heavy workload for staff.
- **The Solution:** We implemented an **AI Voice Agent** that interacts with customers 24/7, qualifies leads by budget and destination, and captures traveler preferences instantly.

The Impact (First 3 Months):

40%

Reduction in lead drop-offs due to instant, round-the-clock engagement.

30–35%

Increase in the volume of high-quality, qualified leads.

Smarter Sales

The human team now only spends time on "hot leads," significantly improving conversion rates.

RESULT: AI and automation that keep your business moving faster, smarter, and more efficiently—so you focus on growth, not grind.

AI Use Case 2 – Sales Analytics

100% Audit Accuracy. Higher Productivity.

THE PROBLEM

- **The Challenge:** An outbound sales team found it impossible to manually monitor every call, leading to inconsistent quality, missed objections, and compliance risks.
- **The Solution:** We deployed an AI Call Analytics system that records, transcribes, and audits every single call in real-time for script adherence and sentiment.

Our Impact (First 3 Months)

- **95% Audit Accuracy** achieved automatically, removing the need for slow, manual checking.
- **Automated Coaching:** The system provides instant feedback to agents, helping them improve their sales pitch every day.
- **Cost Efficiency:** Dramatically reduced the time and money spent on manual audits while boosting overall sales performance.

RESULT: AI and automation that keep your business moving faster, smarter, and more efficiently, so you focus on growth, not grind.

AI Use Case 3 – Travel Industry (Payment Automation)

70% Reduction in Payment Delays

■ THE PROBLEM

- **The Challenge:** A travel company faced frequent delays in corporate bill payments, affecting cash flow and requiring constant manual follow-ups from the team.
- **The Solution:** We implemented a WhatsApp Automation System that sends proactive bill reminders starting 5 days before the due date. The system ensures consistent follow-ups without manual effort.

■ Our Impact (First 3 Months)

- **70% Reduction in delayed payments** within the targeted delay bucket.
- Improved Cash Flow: The majority of clients now pay **on or before the due date**.
- Zero Manual Follow-ups: Automated reminders reduced dependency on human intervention.

RESULT: AI and automation that keep your business moving faster, smarter, and more efficiently, so you focus on growth, not grind.

AI Use Case 4 – Travel Industry (Lead Qualification via WhatsApp)

3x Faster Lead Conversion. Higher Quality Leads.

■ THE PROBLEM

- **The Challenge:** A travel website was generating a high volume of inquiries, but lacked an instant engagement system, resulting in slow responses, unqualified leads, and missed conversion opportunities.
- **The Solution:** We deployed a WhatsApp Automation Funnel integrated with the website that instantly engages visitors, captures their preferences, and qualifies them into hot leads in real-time.

■ Our Impact (First 3 Months)

- 3x Faster response time, engaging users within seconds instead of minutes/hours.
- 40–50% Increase in qualified (high-intent) leads through instant filtering.
- 25–30% Improvement in conversion rates due to real-time engagement.
- Reduced Manual Effort: Sales team now focuses only on pre-qualified leads, saving time and resources.

RESULT: AI and automation that keep your business moving faster, smarter, and more efficiently, so you focus on growth, not grind.

Growth isn't a leap. It's a system you walk through.

Built to grow businesses **3x faster** in just **4 months**.
